axis Therapy Bench

Support At Every Level

The Axis Pediatric Therapy Bench provides a stable, angle-adjustable seating surface designed to promote proper positioning and functional seating. It supports erect posture, anterior pelvic tilt, trunk stability, and weight bearing through the lower extremities – helping children engage more effectively in therapy, play, and daily activities.

Ideal for children who do not require back support, the bench offers a firm supportive seat with adjustable height and tilt to ensure proper foot placement and optimal alignment. This positioning enhances balance, postural control, and upper extremity function.

The Axis Features:

- **Ready-to-Use:** Fully assembled with a supportive cushioned seat.
- **Height & Tilt Adjustable:** Forward and backward tilt to support posture, balance training, weight shifting and functional seating. It allows therapists to customize the fit for the child as they grow and their therapeutic needs change.
- **Secure Locking Knobs:** All adjustments lock firmly in place to provide stable and safe positioning.
- **Tool-Free Adjustability:** Quick height and tilt adjustments without tools for easy transitions between users and activities.
- **Indoor Therapy Use:** Designed for stable use on flat indoor surfaces in clinics, schools and home settings.
- **Easy to Clean:** Wipeable padded surface supports hygiene and simple daily maintenance.
- **Ideal For:** Pediatric OT and PT sessions, balance and core activities, seated play, classroom tasks, and home therapy programs.
- **Available in three sizes.**
- **Warranty:** Two (2) year limited warranty.

axis	AX1100 Small	AX21100 Medium	AX3100 Large
Height	8" – 11"	10.5" – 17"	14" – 23"

Seat Width	27.5"	31.5"	31.5"
Tilt Angles	10 °	6 °	6 °
Weight Capacity	220 lbs	220 lbs	220 lbs

Accessories

- can be used individually or combined.
- Fits on all three sizes.

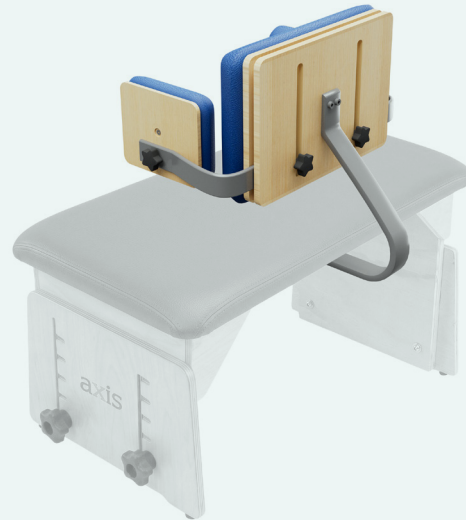

Adjustable Back Support with Laterals

AX1100

Adds comfort and trunk stability for children who need extra support. The padded backrest adjusts in height and depth to promote upright posture and proper pelvic positioning. Adjustable laterals

help maintain midline alignment and reduce side leaning for more stable, symmetrical sitting.

Adjustable Knee Blocks with Abductor and Thigh Supports

AX2100

Provides lower-body positioning and alignment support. Adjustable in width, height, and depth, it helps

keep hips and legs in a neutral position, prevents scissoring, and promotes stable, functional sitting.
